

# WEBINAR

## Thermal processes in component production for fuel cells and electrolysers

November 6, 2024 at 9.00 a.m. and 4.00 p.m.

Fuel cells and electrolysers play a key role in the energy transition, whether in stationary energy supply or in the field of e-mobility.

In order to guarantee an independent energy supply in Europe, domestic production is essential. In this way we can strengthen our security of supply in the long term and free ourselves from external influences or dependencies.

Thermal systems for drying processes are used in the production of individual components for fuel cells and electrolysers. These drying processes with different requirements for bipolar plates and membranes can be realized with solutions from the portfolio of Rehm Thermal Systems GmbH.

Our experts will present these systems and applications for industrial production with the highest quality and throughput requirements in this webinar and will be available to answer your questions.

### Main topics of the webinar:

- Current trends and developments
- Thermal processes in production
  - Bipolar plate
  - Membrane
- Turnkey solutions
- Rehm Thermal Systems as a partner

**November 6, 2024 at 9:00 a.m. CET**  
(for Asia, Europe, ROW)

**November 6, 2024 at 4:00 p.m. CET**  
(for Americas, Europe)

**Registration:** [s.bartosch@rehm-group.com](mailto:s.bartosch@rehm-group.com)

**Duration of the webinar:** 60 min.

*Subject to substantive adjustments*
